

Our commitment to the surrounding world

At Bramming Plast-Industri A/S, we focus on raising the quality of our work by integrating social and environmental considerations into all our activities.

On an ongoing basis, we monitor all relevant environmental and occupational health and safety acts to ensure that our activities are compliant with established legal requirements to the best of our knowledge.

We continue to make important progress. In 2013 we were among the first manufactures in the world to utilize the new Low Emission raw materials in the production of flexible MDI-based foam.

Our Green Accountability, which can be found on our website among other relevant documents, is a public evidence of our efforts to protect the environment and maintain as low impact as possible.

BPI has also introduced a quality management system, which in April 2014 made it possible to fulfill all the standards for obtaining the ISO 9001 certification.

But we want to go further. For 2014-2015, it is our goal to include our commitment to socially responsible activities in our Corporate Strategy.

Such activities may include:

- **Environmental activities**
Continue working on waste minimization, pollution prevention, material and energy reduction, and environmental management.
- **Activities in the supply chain**
Requirements to suppliers to avoid child labour and comply with human rights and labor standards in general, as well as collaborating with suppliers to improve social and environmental conditions.
- **CSR-innovation**
Developing new processes and products with a social and environmental dimension.
- **Customer activities**
Fulfilling requirements from clients, dialogue, marketing and communications with customers.
- **Employee activities**
Continue improving employee conditions, and the working environment within the company.
- **Social activities**
Partnerships, collaboration with educational organizations, community support, contributions, and sponsorships.
- **Management activities**
Policies, procedures and guidelines for CSR.

With these activities it is our intention to embrace internationally acknowledged principles within Human Rights, Labor, Environment and Anti-corruption.

This includes open and credibly communication of all our CSR efforts and achievements as well as involvement of our different stakeholders in our social and environmental improvements.

Bramming - May 23, 2014.
